Project Title: AI-Powered Job Recruitment & Candidate Management System

Internship Platform: Skill Wallet

Academic Year: 2026

Technology used: Salesforce CRM with Agentforce AI

Acknowledgement

I would like to express my sincere gratitude to Skill Wallet for providing me with the opportunity to complete this Salesforce CRM Internship Project. This internship helped me gain practical knowledge of Salesforce Administration, Automation, Security, Approval Processes, Flows, and Agentforce AI.

I sincerely thank my mentors, faculty members, and everyone who supported me throughout the successful completion of this project.

1.Project Overview

The AI-Powered Job Recruitment & Candidate Management System is a Salesforce-based application developed to simplify and automate the recruitment process. The system enables recruiters and hiring managers to manage job openings, candidate applications, approval workflows, and hiring decisions efficiently.

Salesforce automation features such as Flows, Approval Processes, Email Alerts, Validation Rules, and Agentforce AI are integrated to improve recruitment efficiency and reduce manual effort.

2.Objectives

- Manage job openings and candidate applications
- Improve hiring decisions using Agentforce AI
- Automate approvals and notifications
- Secure data using Profiles, Roles, and Users
- Reduce manual Automate the recruitment process
- work through Salesforce automation

3. Technologies Used

Technology	Purpose
Salesforce CRM	Manage recruitment data and business processes
Agentforce AI	Provide AI-based candidate recommendations and insights
Flow Builder	Automate recruitment workflows
Approval Process	Manage offer approval workflow
Validation Rules	Ensure accurate and valid data entry
Email Alerts	Send automated notifications
Reports & Dashboards	Monitor recruitment performance and hiring metrics
Profiles & Roles	Control user access and security
Custom Objects	Store recruitment-related information

4. System Overview

The AI-Powered Job Recruitment & Candidate Management System is designed to simplify and automate the recruitment lifecycle using Salesforce CRM. The system allows recruiters to create job openings, manage candidate applications, evaluate applicants, and generate offers through an automated workflow.

Hiring managers can review candidate information, approve salary offers, and make hiring decisions efficiently. Agentforce AI assists recruiters by providing intelligent candidate recommendations and supporting data-driven hiring decisions.

The application also includes automated email notifications, approval processes, validation rules, reports, dashboards, and role-based security to improve productivity and maintain data integrity.

5. Project Implementation

The AI-Powered Job Recruitment & Candidate Management System was developed using Salesforce CRM and Agentforce AI. The project was implemented by configuring custom objects, automation, security, AI features, and approval workflows to streamline the recruitment process

5.1 Lightning Application

A custom Lightning Application named **AI Recruitment System** was created to provide a centralized workspace for recruiters and hiring managers. The application includes tabs such as Candidate Applications, Job Openings, Accounts, Reports, and Dashboards for easy navigation.

Figure 5.1: AI Recruitment System Lightning Application

5.2 Custom Objects

Two custom objects, **Candidate Application** and **Job Opening**, were created to manage recruitment data. These objects store candidate

information, job details, application status, AI scores, and offer details throughout the hiring process.

Figure 5.2: Candidate Application Object

Figure 5.2.1: Job Opening Object

5.3 Custom Tabs

Custom tabs were created for the Candidate Application and Job Opening objects. These tabs provide quick access to recruitment records through the Lightning Application.

Figure 5.3: Custom Tabs

5.4 Fields and Relationships

Custom fields were added to capture important recruitment information such as AI Candidate Score, Offer Amount, Application Status, and Approval Status. Relationships were established between Candidate Applications, Job Openings, and Contacts to maintain data consistency.

Figure 5.4: Candidate Application Fields & Job Opening Fields Relationships

5.5 Validation Rules

Validation Rules were implemented to ensure that mandatory information is entered before saving records. These rules help maintain data accuracy and prevent incomplete or invalid records from being stored.

Figure 5.5: Validation Rules

5.6 Approval Process

An approval process was configured for candidate offer approvals. When the offer amount exceeds the specified limit, the request is automatically sent to the Hiring Manager for approval before the offer can be finalized.

Figure 5.6: Approval Process

5.7 Email Templates and Email Alerts

Email Templates and Email Alerts were created to automate communication during the recruitment process. Notifications are automatically sent to recruiters and hiring managers whenever important recruitment events occur.

Figure 5.7: Email Templates

Figure 5.7.1: Email Templates

Figure 5.7.2: Email Alerts

5.8 Automation Flows

Record-Triggered Flows were implemented to automate recruitment activities such as candidate prioritization, offer management, and pending application reminders. These flows reduce manual effort and improve process efficiency.

The screenshot shows the Salesforce Setup page for Flows. The left sidebar has a search bar with 'flows' and a list of categories: Process Automation, Flows (selected), and Identity. The main content area shows a table of flow definitions. Two flows are highlighted: 'High Priority Candidate Application Notification' and 'High Salary Offer Submission for Approval'. Both are Autolaunched Flows, currently Unmanaged, and were last modified by JOSHMI PRAGADA on 7/4/2026.

5.9 Agentforce AI Integration

Agentforce AI was integrated into the system to provide intelligent candidate recommendations and AI-generated insights. The AI assistant supports recruiters by improving hiring decisions and reducing manual evaluation time.

Figure 5.9: Agentforce AI

5.10 Page Layout Customization

Page Layouts were customized for Candidate Application and Job Opening objects to display relevant information in an organized manner. This improves usability and simplifies data entry.

Lightning Record Pages were customized using the Lightning App Builder to provide an improved user experience. Important fields and related information are displayed in an easy-to-access layout.

Figure 5.10: Candidate Application Layout

Figure 5.10.1: Job Opening Layout

Figure 5.10.2: Contact Layout

Figure 5.10.3: Account Layout

5.12 User Management and Security

Security was implemented using Users, Profiles, Roles, Matching Rules, and Duplicate Rules. Recruiters and Hiring Managers were assigned appropriate permissions to ensure secure access to recruitment data.

6. User Adoption & Change Management

The AI-Powered Job Recruitment & Candidate Management System was designed to provide a simple and user-friendly experience for recruiters and hiring managers. The system integrates AI features and automation into the existing Salesforce environment, reducing the learning curve for users.

6.1 User Adoption

The following strategies were used to improve user adoption:

- Integrated Agentforce AI into the recruitment process.
- Used the standard Salesforce Lightning interface for easy navigation.
- Added clear field labels and page layouts for better usability.
- Automated repetitive recruitment tasks using Flows and Approval Processes.
- Reduced manual work by providing AI-based candidate recommendations.

6.2 Monitoring and Support

After deployment, the system was monitored to ensure smooth operation and user satisfaction.

The following activities were performed:

- Monitored recruitment automation and approval workflows.
- Verified AI recommendations and candidate scoring.
- Reviewed flow execution and email notifications.
- Collected user feedback to improve system performance.

6.3 Business Impact

The implemented solution provides the following benefits:

- Faster recruitment process.
- Improved candidate evaluation using AI.
- Reduced manual effort through automation.
- Better approval management for job offers.
- Increased productivity for recruiters and hiring managers.
- Improved accuracy and consistency in recruitment activities.

7. Project Documentation Summary

The AI-Powered Job Recruitment & Candidate Management System was successfully designed and implemented using Salesforce CRM and Agentforce AI. The project automates the recruitment process by managing job openings, candidate applications, approval workflows, email notifications, and AI-assisted hiring decisions.

The system includes custom objects, Lightning applications, page layouts, Lightning Record Pages, validation rules, approval processes, automation flows, email templates, reports, dashboards, and security configurations. These features improve recruitment efficiency, reduce manual effort, and support better hiring decisions.

The project documentation provides a complete overview of the system architecture, implementation process, automation components, security model, and testing results. It also serves as a reference for future maintenance, enhancements, and knowledge transfer.

8. Testing & Results

The AI-Powered Job Recruitment & Candidate Management System was tested to verify that all modules and automation features function correctly. Each component was tested individually to ensure the system met the business requirements and performed as expected.

Test Case	Expected Result	Status
Candidate Application Creation	Candidate application created successfully	Pass
Validation Rules	Invalid data displays an error message	Pass
Approval Process	High salary offers sent for approval	Pass
Email Alerts	Notification emails sent automatically	Pass
Flow Automation	Recruitment flows execute successfully	Pass
Agentforce AI	AI recommendations generated correctly	Pass
User Security	Profiles and Roles restrict access properly	Pass

8.2 Results

The AI-Powered Job Recruitment & Candidate Management System was successfully developed and tested using Salesforce CRM and Agentforce AI. All project modules, including custom objects, automation flows, approval processes, validation rules, email alerts, security settings, and AI features, worked successfully. The system reduced manual effort, improved recruitment efficiency, and provided intelligent support for hiring decisions.

9. Conclusion

The AI-Powered Job Recruitment & Candidate Management System was successfully implemented using Salesforce CRM and Agentforce AI. The project automated the recruitment process by integrating custom objects, approval workflows, email notifications, validation rules, and AI-powered recommendations.

The solution improved recruitment efficiency, reduced manual work, and ensured secure access through Profiles and Roles. Overall, the project demonstrated how Salesforce CRM can be used to build an intelligent and scalable recruitment management system.

10. Future Scope

The project can be further enhanced by implementing additional features such as:

- AI-based resume screening and candidate ranking.
- Integration with external job portals.
- Automated interview scheduling.
- Advanced recruitment analytics dashboards.
- Mobile application support.
- Integration with third-party HR management systems.
- Enhanced AI recommendations using future Salesforce AI capabilities.
